Instructions

1. This part of the contest consists of 4 problems, is 1 hour long and is worth a total of 100 points.
2. Only blue pen should be used to fill in the answer boxes, draw and mark on the star chart.
3. You are not allowed to leave your working desk without permission. If you need any assistance (malfunctioning calculator, need to visit a restroom, etc.), please put up your hand to signal the supervisor.
4. The beginning and end of the competition will be indicated by a long sound signal.
5. Wait at your table until your envelope is collected. Once all envelopes are collected, your student guide will escort you out of the competition area.

O1**(40 points)**

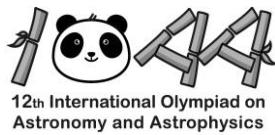

Figure 1 is a whole sky star chart of Yanqing, Beijing at 20:30 tonight (UTC+8) with the limit magnitude = 5^m (m = magnitude). Four stars (about 1^m - 3^m) and one planet (brighter than 2^m) are missing in this chart. In the chart, the distance from the centre is in proportion to zenith distance

- (1) (20 points) Draw a cross (X) on the location of each missing star and mark "T" on the chart, and draw a cross (X) on the location of the missing planet and mark "P" on the chart.
- (2) (5 points) Please mark the orientation of the star chart with "N" "E" "S" "W" at the edge of the star chart.
- (3) (10 points) On the chart, the celestial equator passes through many constellations. Please write down the name of any five of these constellations (IAU codes).

Answer:

- (4) (5 points) Using the star chart, estimate the altitude of Aldebaran (α Tau), to the nearest degree.

Answer:

12th International Olympiad on
Astronomy and Astrophysics

Observational Competition (Day)

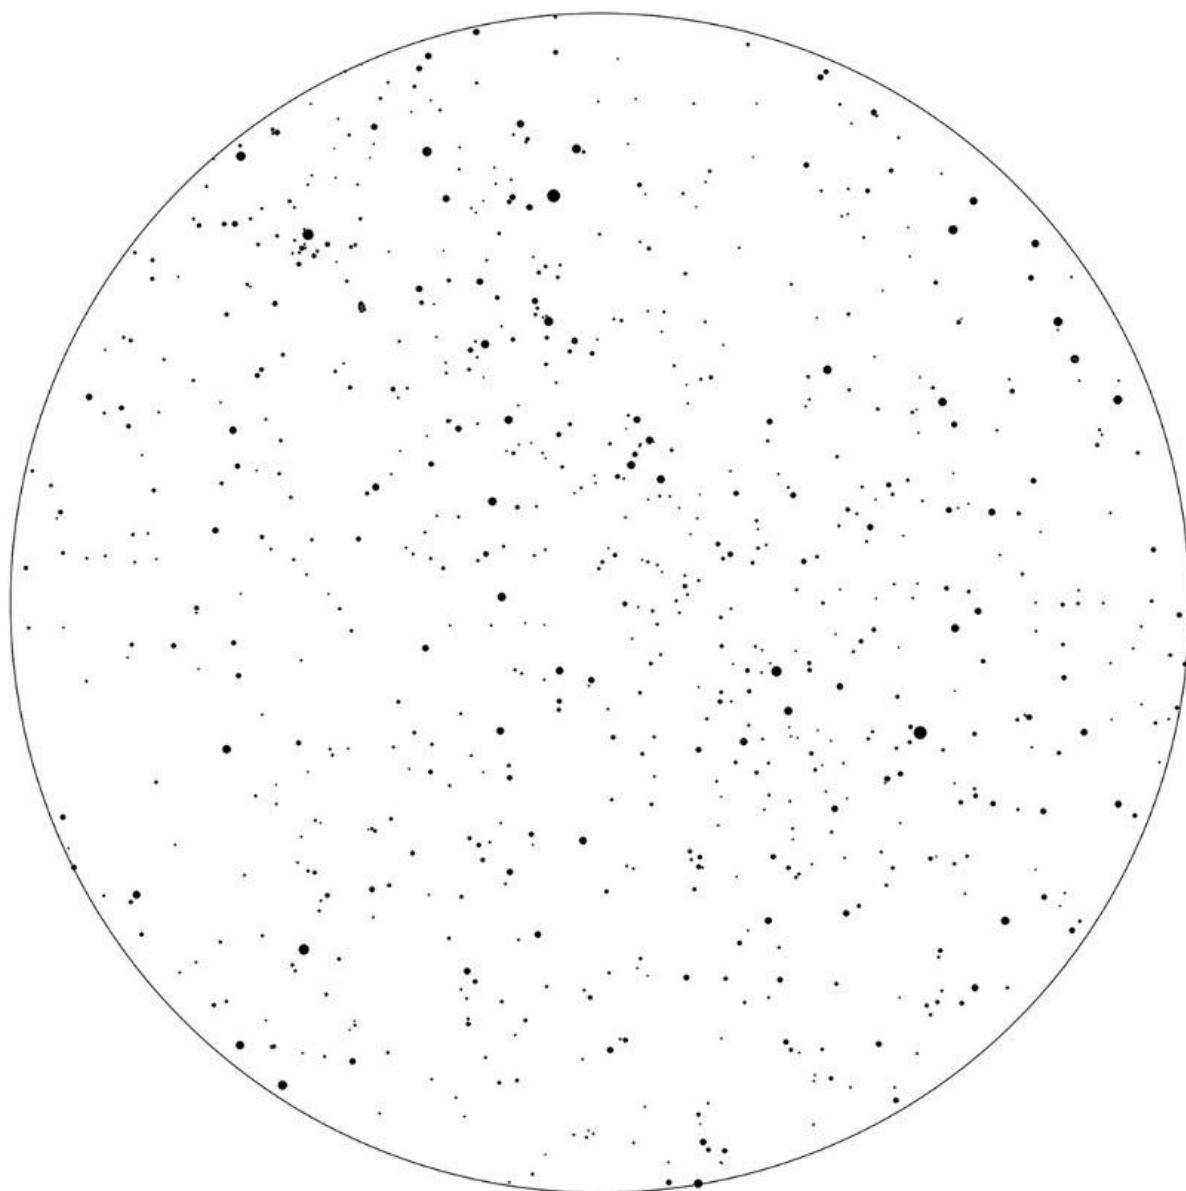

Figure 1

O2

(20 points)

Figure 2 is a star chart of a recent opposition of Jupiter. The grid in the figure is the ecliptic coordinates. Please estimate the date of this opposition, to the nearest day.

Answer:

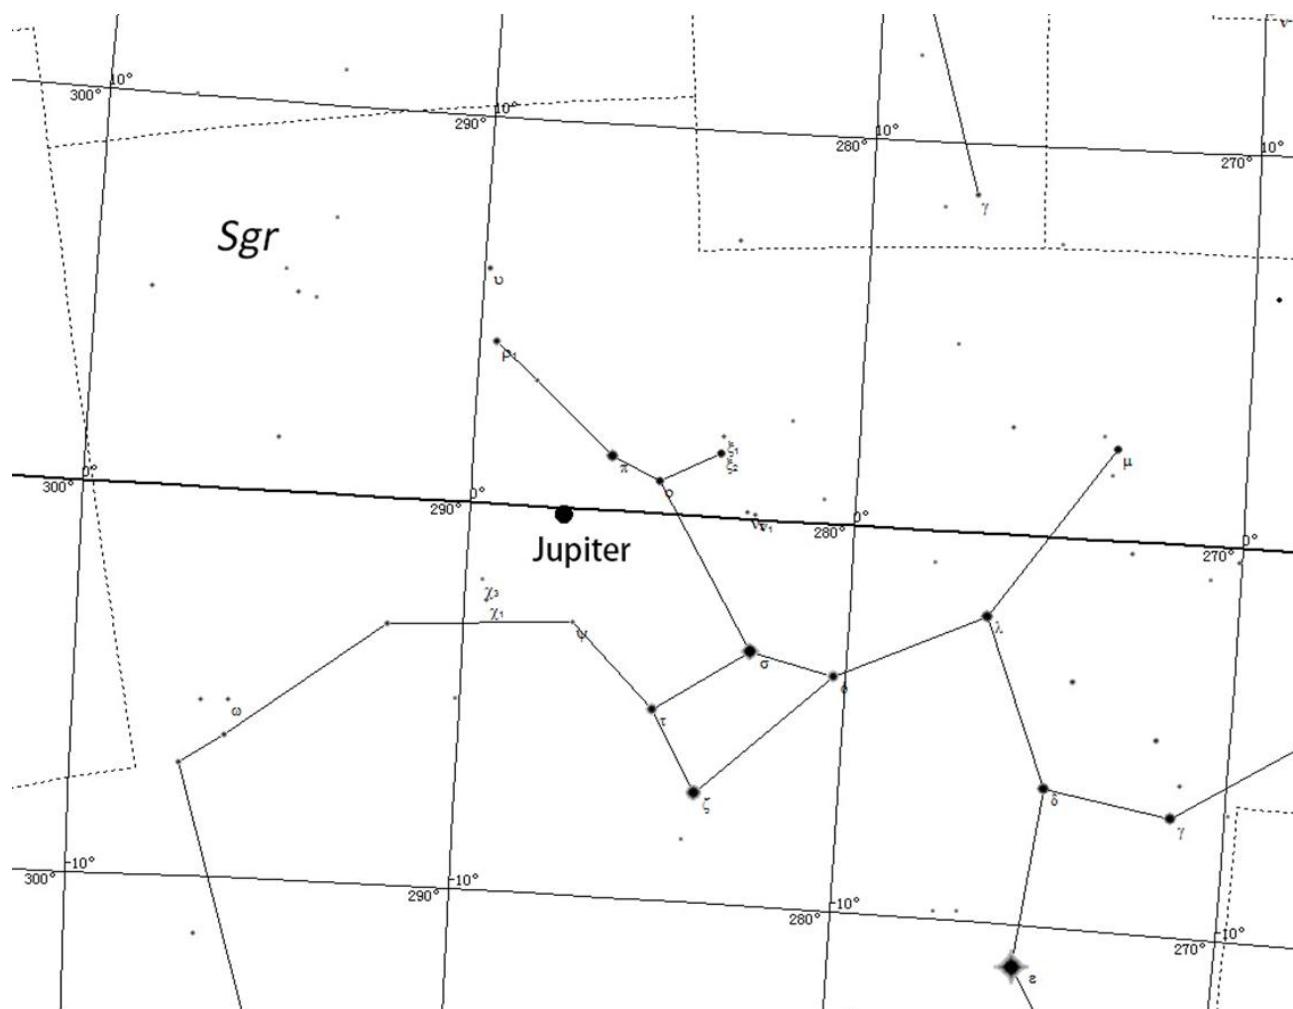

Figure 2

O3

(20 points)

Figure 3 is a star chart of a part of the sky on March 21, 2018. The longitude and latitude of the observation site is 120°E, 40°N (UTC+8). The grid in the figure is an equatorial grid. The thicker vertical line in the centre is the meridian. Estimate the mean solar time to an accuracy of better than 0.5h.
